

Demystifying NLIS Online

Introduction

- ▶ Stephen Hatty
- ▶ Ganmain Show Society
- ▶ Ganmain is 50 km North west of Wagga Wagga, Riverina NSW
- ▶ Small one day Show
- ▶ 2018 marks our 110th annual show

My Involvement

- ▶ Started as Prime Lamb Steward 1987
- ▶ Head Steward Prime Lambs 1995
- ▶ Head Steward Sheep Pavilion 2004
- ▶ Started NLIS online database entries 2012
- ▶ President 2013

What is NLIS

- ▶ National Livestock Identification System (NLIS)
- ▶ National system for the identification and traceability of commercial animals
- ▶ Introduced in 1999 to enhance the ability to trace Cattle during disease and food incidents
- ▶ Expanded in 2009 to include Sheep and Goats
- ▶ Pigs have since been added to the system

Why NLIS

- ▶ Australian red meat production is a significant part of the economy
- ▶ Beef - Large domestic trade and greater than 60% exported
- ▶ Sheep meat - Mainly Domestic with a significant export market
- ▶ Australia is free of most agricultural and aquatic pests and diseases so relies on clean green reputation for international trade advantage.
- ▶ Having an efficient traceability system will assist in containing disease outbreaks and chemical residue issues
- ▶ With animals coming together from different farms at events such as Shows, the traceability is essential if a disease outbreak arises
- ▶ All potential carriers can be confined until 'clean' status can be assured

How does this affect Show Societies

- ▶ Animal movements need to be recorded onto and off show grounds
- ▶ As of 1st July 2017 show organisers or operators are responsible for notifying the NLIS database of the movement of stock to and from a show or other sporting event
- ▶ This is achieved with 3 main elements to the system
 - ▶ 1. Animal Identifier (NLIS-accredited device)
 - ▶ 2. Physical Location Identifier - Property Identification Code (PIC)
 - ▶ 3. Web Accessible Database

Prior to your show

- ▶ Ensure your Showground has a Property Identification Code (PIC).
- ▶ This is assigned to a **SHOWGROUND** not a **SHOW SOCIETY**
- ▶ If ground is run by Trust, Council or Private, the management needs to have PIC
- ▶ If a new PIC is required visit www.nlis.com.au click “STARTING WITH NLIS” follow links to Local Land Services or contact Local Land Services in your area.

Prior to your show

- ▶ Register for an NLIS account
- ▶ Individual organisations using a showground should have their own NLIS account. Show Society, Rodeo, Yard dog Trial etc.
- ▶ Show Societies will generally have a “SPORTING ACCOUNT”
- ▶ Someone will need to take responsibility for login details
- ▶ If a new account is needed go to www.nlis.com.au and look for “REGISTER”
- ▶ Follow prompts to register
- ▶ You will need your Showground PIC no. for the registration

Prior to your show

- ▶ Advertise in your Schedule of events your show ground PIC no.
- ▶ Notify exhibitors they will need to supply a National Vendor Declaration NVD/waybill.
- ▶ NVD's are required by producers to sell Livestock so they should know what they are about
- ▶ Have a designated person responsible for collecting of paperwork on Show day and for data entry post show
- ▶ Remember, Sheep entering the grounds for **Quickshear** competitions or **Working Dog Trials** or Cattle for **Team penning** etc. also need to be recorded. Ensure people responsible for these sections are aware of this.

Show Day

- ▶ Collect relevant Paperwork, NVD/Waybill plus any health statements etc. to suit your requirements
- ▶ Ensure all information is filled out while owner of the stock can be consulted
- ▶ Tip - In section titled “**destination**” have owner list “**your showground and return**”
- ▶ This will mean the one NVD covers the return of stock to the property of origin
- ▶ If animals are not returning to the PIC they came from, a second NVD needs to be written to cover movement from ‘home PIC’ to the new Pic.

- ▶ There are several different NVD/Waybill variations. All similar in appearance

Sheep and Lambs

Purple

Cattle

Yellow

EU Cattle

Light green

Bobby Calves

Dark Green

Goats

Red

Post show

- ▶ All Cattle, Sheep and Lambs, Goats and Pigs which have entered the show ground must be recorded on the database **within 2 days** of the event
- ▶ The date entered must be the date the event was held
- ▶ For events of more than 1 day, the date will be the first day the animals were present at the event
- ▶ The exception to the 2 day rule is that any **Hoof and Hook** animals are to be recorded **before leaving** the show ground
- ▶ File all NVD/waybills and retain for **7 years**
- ▶ Database entries can be done on show day if you have the recourses to do so

Identification devices

Radio Frequency Identification Device

NLIS Identification Device (Visual)

What is an (electronic) RFID? What is a (visual) NLISID?

An electronic Radio Frequency Identification Device (RFID) has both an NLISID and an RFID number. Both of these numbers can be used to individually identify animals on your property. When you buy NLIS devices for your PIC, the device manufacturer registers the NLISID and RFID numbers on the Database, so when you use the Database, you can enter either the NLISID or the RFID associated with a specific animal.

An NLISID number is printed on the outside of an electronic ear tag, or on a visual ear tag indicating a rumen bolus was applied (cattle only). An NLISID number can only be read visually (e.g. when you look at the number on the device on a tagged animal). The first eight characters of an NLISID are the PIC the device was issued to.

An RFID number is assigned to the electronic RFID chip inside a device. An RFID number can only be read electronically (e.g. when you scan animals with a reader).

Example: Cattle 'breeder' RFID ear tag manufactured in 2014

If you enter the RFID, the NLIS database can derive the device type from the 10th character of the NLISID.

Example: Sheep 'breeder' RFID ear tag manufactured in 2015

If you enter the RFID, the NLIS database can derive the device type from the 10th character of the NLISID.

Cattle Identification Device

Ensure you write the entire NLIS ID or RFID number for each device as shown below

RFID: the number shown on the RFID scanner (3 numbers, a space then 12 numbers)

9	8	2	0	0	0	0	0	1	2	3	4	5	6	7
---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

NLIS ID: the visual number printed on the outside of the NLIS ear tag (16 characters)

N	G	4	7	4	1	6	2	X	E	Y	0	0	0	2	4
---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

Radio Frequency Identification Device RFID
3 numbers space 12 numbers

NLIS ID (Visual Tag) 16 characters

Cattle breeder devices are always white. Here are some examples of cattle breeder devices:

Sheep Identification Device

Sheep & goat breeder devices may be yellow, but usually follow the colour-of-year system. Here are some examples of sheep & goat breeder tags:

The colour-of-year system for sheep and goat breeder devices rotates every eight years:

Year	Tag colour	Year	Tag colour
2008	Black	2016	Black
2009	White	2017	White
2010	Orange	2018	Orange
2011	Light green	2019	Light green
2012	Purple	2020	Purple
2013	Yellow	2021	Yellow
2014	Red	2022	Red
2015	Sky blue	2023	Sky blue
Any year	Post-breeder tags must be pink		

- Some Sheep Studs will be using RFID Tags
- You only need to record PIC
- Access to electronic scanning will allow easy recording of complete number
- Most flock sheep will have visual tag with NLIS Logo and 8 digit PIC number
- Colours are not mandatory but most sheep will be using year colour coding

To Login

www.nlis.com.au

The image shows a screenshot of the National Livestock Identification System (NLIS) website. The top navigation bar contains the NLIS logo on the left and four menu items: 'ABOUT NLIS', 'STARTING WITH NLIS', 'ADDITIONAL RESOURCES', and a blue button containing 'REGISTER' and 'LOG IN'. A red circle highlights this button. Below the navigation bar is an orange banner with the text 'NEW (June 2017) Try out our new Dashboard website. Click here to read more'. The main content area features a large image of two brown cows and two white goats in a field. Overlaid on this image is the text 'WELCOME TO NLIS' in large blue letters, followed by 'AUSTRALIA'S NATIONAL LIVESTOCK IDENTIFICATION SYSTEM' in smaller blue letters. Below this text are two blue buttons: 'REGISTER' and 'LOG IN'. A small blue downward arrow icon is visible at the bottom center of the image area.

To Login

The login form is a light gray box containing the following elements from top to bottom: a text input field for 'NLIS User ID' with the placeholder text 'Your NLIS User ID'; a link 'Forgot your NLIS User ID?'; a text input field for 'Password' with the placeholder text 'Your password'; a link 'Forgot your password?'; a blue button labeled 'LOG IN'; a checkbox labeled 'Stay logged in'; the word 'OR' centered between two horizontal lines; a button labeled 'Log in with my mla' where 'my' is in a script font and 'mla' is in a bold sans-serif font, with 'MEAT & LIVESTOCK AUSTRALIA' in small text below 'mla'; and a link 'What's myMLA?' at the bottom right.

Don't have an NLIS account? [Register now](#)

Cattle

- ▶ There are 2 options when recording Cattle movements
- ▶ 1. **“Sighted Livestock”** only available on **“Sporting Event”** accounts as long as the cattle are on the grounds for **3 days or less**
- ▶ 2. **“Property to Property” (P2P)** transfers. This is the only option for Cattle on a showground for more than 3 days

Cattle Sighted Livestock

- ▶ **SIGHTED LIVESTOCK** is the easiest way to record short term movements
- ▶ An Electronic Tag reading device is a convenient way to gather information and store, ready to upload to the database via USB connection to a computer.
- ▶ Visual tags can be read manually and recorded but can be a challenge with large animals and dirty tags.
- ▶ 1 entry is all that is needed under the **SIGHTED** system rather than a transfer onto and off The PIC as with full P2P transfers
- ▶ 2 options for data recording to the database
 - Upload as a file as recorded on electronic reader or computer file such as 'Excel'
 - Type in details on database screen

Property to Property P2P

- ▶ A P2P transfer is required
- ▶ 1. When animals are on a show ground for more than 3 Days
- ▶ 2. When animals are moving off the show ground to a different property from which they arrived

These can be sighted at the Showground by event organiser

Plus P2P from PIC of origin to new PIC by the owner of the Stock

- ▶ 3. Hoof and Hook competitions where the animals are going to an abattoir.

These can be Sighted at the show ground by Event organiser

Plus P2P from PIC of origin to Abattoir PIC by the abattoir operator

- ▶ A number of scenarios are listed in the
NLIS: Guidelines for NSW Shows and sporting events

What animals need to be recorded

- ▶ Cattle - Record and enter onto database
- ▶ Sheep and Lambs - Record and enter onto Database
- ▶ Goats - Record and enter onto Database
- ▶ Horses - Record and store information for 7 years, **no database**
- ▶ Pigs - Pigpass required consult NSW DPI or LLS
- ▶ Alpacas - There is no NLIS for Alpacas and therefore no need to upload their movement to and from the show in the NLIS database.

Some Alpaca producers are tagging their alpacas with electronic tags. Please advise the show societies to keep a record of where all the alpacas and their exhibitors have come from (FROM PICs, address and contact details, number of animals exhibited at the show etc) and if they move somewhere else after the show, apart from going home. There is no NVD and no TSS requirements for alpacas yet either.

Questions

The background features abstract, overlapping geometric shapes in various shades of blue, ranging from light sky blue to deep navy blue. These shapes are primarily located on the right side of the frame, creating a modern, layered effect against the white background.
